

ABSTRACT OF DISCLOSURE

The present invention relates to a method of determining whether to transfer an audio, video, or text data file, requested to be transferred through a mobile station, based on specified transfer condition and/or file size, and transferring the data file to a destined mobile terminal connected through a mobile communication network. The present method stores a data file and transfer conditioning information thereof, which contains information on file size and/or transfer blocking time zone and a destination terminal, received from a calling mobile terminal connected through the mobile communication network, selects a data file to transfer and determines whether to transfer the selected data file based on the transfer conditioning information, and transmits the selected data file to a called mobile terminal specified as destination by the transfer conditioning information.
